An average installation consists of connecting 6 wires to the vehicle's ECU wiring loom, changing the settings of the SMT8 in the setup section of the LetRipp II Tuning Software and voila - you are ready to re-tune the vehicle. An experienced installer can install an SMT8 unit within 30 minutes for a basic installation.

SMT8

SMT (also called HyperThreading or HT) is a feature that is supported on Check Point appliances running Gaia OS. When enabled, SMT doubles the number of logical CPUs on the Security Gateway, which enhances physical processor utilization. When SMT is disabled, the number of logical CPUs equals the number of physical cores.

SMT (HyperThreading) Feature Guide

Installation and tuning is simple and once installed the engine can be re-tuned by anyone with a laptop or PC, communication cable and the LetRipp II Tuning Software with ease. An average installation consists of connecting 6 wires to the vehicle's ECU wiring loom, changing the settings of the SMT8-T in the setup section of the LetRipp II Tuning Software and voila - you are ready to re-tune the vehicle.
